

Pig Pen

Overview and Features

Pig Pen

Pig Pens are built to serve as storage for pig tail cable assemblies. They consist of a metal frame with a ceiling of rows of slots that allow up to size 4/0 AWG cables with Series 16 CAMs to be slid neatly into these slots.

They keep pig tail assemblies organized, eliminate the time spent coiling and zip tying pig tail assemblies, and improve safety on the job site by greatly reducing the amount of damage that these cable assemblies take from improper storage.

Features & Benefits

1.25 inch wide parallel slots allow for easy access and organization of pig tails

Saves on costs by reducing damage to lugs, cams, and cables

Saves tons of time on cable sorting, coiling, and storing

Engineering drawings provided upon request

Pig Pen design allows pigtails to be easily transported

Capacity of up to 200 pig tail cable assemblies

Applications

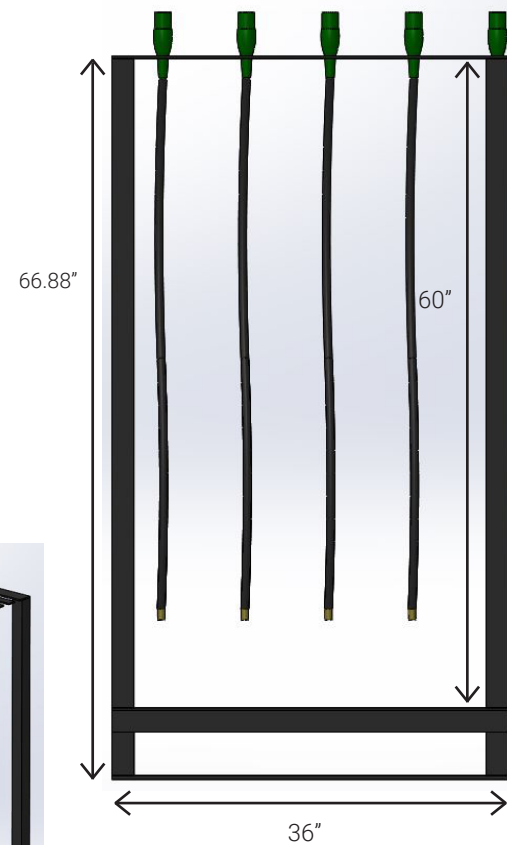

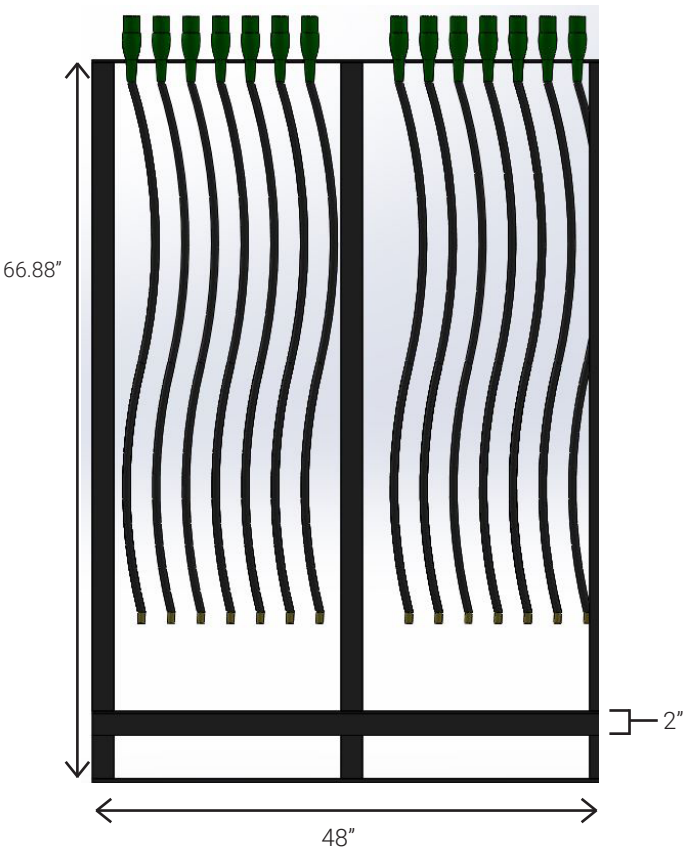

EASY AND SAFE PIG TAIL TRANSPORTATION

LUGS AND CAMS DAMAGE PREVENTION

**For custom capacities, slot sizes, and
Pig Pen heights just call or email.**
